

XM Radio and other satellite radio broadcasters provide an invaluable service. They provide news, weather, sports, traffic reports and other entertainment without commercials for a nominal fee which is important to me. I feel they have a right to broadcast traffic and weather, which is protected by the first amendment. This is a service I PAY for and wish for it to continue. Capitalism is what this country is based on and competition is simply part of doing business. Taking away the right to be competitive is purely censure and breeds monopolies. I beseech you, the FCC, to do what is just, under the law and allow satellite radio to continue to provide this service. I strongly urge you to oppose house bill HR 4026.

Sincerely,
Brett Smith
